

ENHANCED INTERNET NAVIGATION

This patented technology generally relates to enhanced Internet navigation by retrieving a page from a hyper-linked website for retrieval offline on a personal computer. This enables certain website content to be saved, retrieved, and accessed locally, without the need for Internet connectivity. Other aspects of the technologies generally relate to information distribution and processing via the use of a linking reference to access sets of data. These technologies can be used in email transmissions with links to websites, special offers, and other information.
